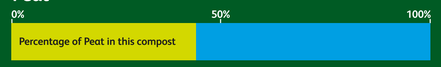
- Store in a frost free place and away from weedkillers and other garden chemicals.
- Wear gloves when handling.
- Re-seal bag after use.

## PRODUCT INFORMATION

At Westland we are always striving to make our products clearer and easier to understand so you can make more informed purchase decisions.

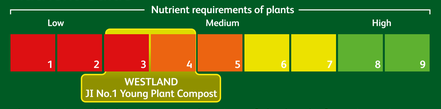
Westland John Innes No.1 Young Plant Compost contains the following key ingredients:

### Peat



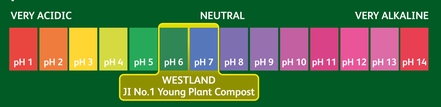
This compost contains a medium level of peat for a better, more consistent growing medium with improved moisture and nutrient retention. It offers the ideal balance between air and water holding, making it the perfect environment for healthy root growth.

### Nutrient Guide



The Nutrient Guide gives an indication of the level of nutrients in compost. John Innes No.1 Young Plant Compost sits in the 3-4 range providing a low-medium level of nutrients to aid seedling establishment, vigour and growth.

### pH



pH is a measure of the acidity of the compost. A pH that is too high or too low will result in a reduced nutrient uptake. This compost has the optimum pH for ensuring the correct amount of nutrients are freely available for plant uptake.

## FOR EVEN BETTER RESULTS

When plants are growing it is important to keep providing nutrients. Feed-all Slow Release Granular Plant Food or Nutri Plant Feed will provide your plants with all they need to stay healthy.

# John Innes No.1
## Young Plant Compost

**John Innes composts were developed over 50 years ago and are based on a traditional recipe of sterilised loam, peat and horticultural grit with added nutrients.**

## Why use Westland John Innes No.1 Young Plant Compost?

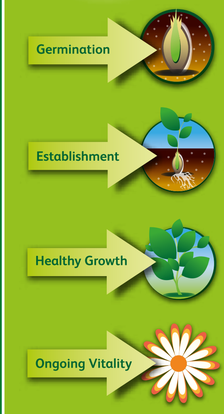
Westland John Innes No.1 Young Plant Compost, a loam based compost which is a naturally reduced peat mix, is specifically designed to establish young seedlings and plants.

Westland John Innes No.1 is the best choice for young plants:

- Contains a carefully balanced nutrient content to suit young plants
- Easy to water and re-wet
- High loam content acts as a buffer for nutrients
- Heavy compost to stabilise small pots and containers

Life partner for plants

**The Westland John Innes range of composts contain the ideal ingredients to help plants grow strong and healthy throughout every stage of their life.**



**Moisture and air are essential for seeds to show the first signs of life.** This compost has an open structure and moisture retaining properties to encourage that all important germination.

**Strong healthy plants start with strong healthy roots.** The light, fibrous composition of this compost is a perfect environment for rooting as it allows roots to spread out to the whole container.

**A well fed plant is a happy plant.** The base nutrient supply in this compost feeds the plant evenly and for a longer period before it needs to be fed again. And the loam in the John Innes will make sure nutrients are there to promote healthy growth and flowering.

**The unique properties of this compost set a plant up for life.** It's easy to rewet, it retains moisture and drains easily which not only prevents the roots from being waterlogged, it makes sure the plant has enough air to breathe.

## How do I use it?

First, put on a pair of gloves and rework compost between your hands, so it regains its intended texture. Then you're all set.

## Potting-on

- Fill pot with John Innes No.1 Young Plant Compost, water and allow to drain.
- Prick out seedlings when they are large enough to handle.
- Hold seedling by the leaves to avoid damage and tease roots out using a dibber or pencil.
- Place the seedlings in a small hole, making sure that the roots are not exposed and gently fill in with compost.
- Place the seedlings on a windowsill or in a greenhouse out of direct sunlight.
